Education

Vidyalankar Institute of Technology June 2023 – June 2027
Bachelor of Technology in Computer Science *University of Mumbai, India*

Experience

Opt IT Technologies Feb 2026 – Apr 2026
Cloud Services Intern *Remote*

- Designed and implemented an **Internal Developer Platform (IDP)** using **Backstage.io** to standardize client cloud onboarding through self-service infrastructure provisioning workflows.
- Developed **7+ Backstage Scaffolder templates** and a centralized library of reusable, version-controlled **Terraform modules**, enabling standardized infrastructure provisioning across **AWS, Azure, and GCP**.
- Built an automated **GitOps-based onboarding workflow** that fetches Terraform modules, renders Infrastructure-as-Code using Nunjucks templating, and creates pull requests on client GitHub repositories for review-driven deployments.
- Integrated **Backstage** provisioning workflows with **GitHub Actions** and multi-cloud infrastructure tooling, supporting automated infrastructure delivery across **AWS, Azure, and GCP**.
- Deployed and validated the platform on multiple **AWS EC2** environments using Docker, and investigated deployment challenges during an on-premise rollout involving Node.js dependency management and Backstage runtime configuration.

Projects

Local Guide Booking System Oct 2026 – Oct 2026

- Built an **11-stage Jenkins CI/CD pipeline** with 51 pytest unit/integration tests (**94% branch-aware coverage**), 5 Selenium E2E tests, and a **SonarQube quality gate**.
- Secured releases with a **two-stage Docker build**, non-root runtime, **Trivy gates** for fixable HIGH/CRITICAL vulnerabilities, and secrets managed through **Jenkins credentials and Kubernetes Secrets** rather than Git; published immutable Docker Hub images.
- Deployed a Flask application to a **single-node K3s cluster** using **Ansible, Helm, and Argo CD**, enabling GitOps deployments and Git-revert rollbacks.
- Instrumented the application with **6 custom Prometheus metrics** and a **Grafana dashboard**; configured Kubernetes health probes and a migration init container to resolve a missing-table error.

Automated Cloud Cost Optimization Engine Jan 2026 – Jan 2026

- Built an automated log archival pipeline using **Shell Scripting** and **AWS CLI** to migrate Jenkins build logs from EBS volumes to **Amazon S3 Infrequent Access**.
- Scheduled and monitored recurring archival tasks using Linux **cron**, ensuring reliable long-term log retention.
- Applied **S3 lifecycle policies** to transition and expire logs efficiently, reducing long-term storage costs.

Skills

Programming & Scripting: Python, Shell Scripting, SQL, YAML
Cloud & IaC: AWS (EC2, S3, VPC, IAM, CloudFormation), Azure, GCP, Terraform
DevOps & Platform: Docker, Kubernetes, K3s, Jenkins, GitHub Actions, Ansible, Helm, Argo CD, Backstage.io
Monitoring & Security: Prometheus, Grafana, SonarQube, Trivy
Systems & Tools: Linux, Git, GitHub, AWS CLI

Certifications

Linux Foundation: Introduction to Linux (LFS101) | Credential

Extracurricular

Community Health and Support Initiative (CHSI) Aug 2024 – Oct 2024
Volunteer, Anjuman Charitable Trust *Mumbai, India*

- Distributed hygiene and first-aid kits, supported outreach reaching **200+ residents**, and participated in beach cleanups removing **50+ kg of waste**.
